VTU_DAA_Week 1_MCQ

Attempt : 1

Total Mark : 15

Marks Obtained : 15

Section 1 : MCQ

1. An algorithm must have a clear stopping point to ensure

Answer

Finiteness

Status : Correct

Marks : 1/1

2. Which of the following is true about algorithmic determinism?

Answer

Algorithms must produce the same output for the same input

Status : Correct

Marks : 1/1

3. An algorithm's effectiveness refers to

Answer

Each step contributes to solving the problem

Status : Correct

Marks : 1/1

4. Which notation is used to describe both the upper and lower bounds of an algorithm's efficiency?

Answer

Θ (Big theta)

Status : Correct

Marks : 1/1

5. What is the purpose of using asymptotic notations in the analysis of algorithm efficiency?

Answer

To take meaningful statements about an algorithm's efficiency based on its growth rate

Status : Correct

Marks : 1/1

6. What does the Big Theta notation (Θ) indicate about an algorithm's efficiency?

Answer

It describes the tightest possible bound on the algorithm's running time.

Status : Correct

Marks : 1/1

7. Which of the following statements is true regarding the relationship between Big Oh (O), Big Omega (Ω), and Big Theta (Θ) notations?

Answer

If $f(n) = O(g(n))$ and $f(n) = \Omega(g(n))$, then $f(n) = \Theta(g(n))$

Status : Correct

Marks : 1/1

8. What does "Big O" notation represent in relation to algorithms?

Answer

A method to analyze and express the efficiency of an algorithm

Status : Correct

Marks : 1/1

9. An algorithm is required to produce a definite and unambiguous outcome for every valid input. This characteristic is known as _____.

Answer

determinism

Status : Correct

Marks : 1/1

10. Which approach is used to prove the correctness of algorithms by analyzing a sequence of steps?

Answer

Mathematical induction

Status : Correct

Marks : 1/1

11. In the context of algorithm design, what does the term "in-place" refer to?

Answer

The algorithm modifies the input data directly without using additional memory

Status : Correct

Marks : 1/1

12. What is the primary purpose of analyzing an algorithm's efficiency?

Answer

To optimize the algorithm's time and space efficiency

Status : Correct

Marks : 1/1

13. In the context of algorithmic problem-solving, what does the "generality of an algorithm" refer to?

Answer

The ability of an algorithm to handle a wide range of problem types

Status : Correct

Marks : 1/1

14. Which parameter is commonly used to measure an algorithm's input size?

Answer

Number of bits/characters representing the input

Status : Correct

Marks : 1/1

15. The concept of "Orders of Growth" in algorithm analysis refers to:

Answer

The function that describes the algorithm's efficiency

Status : Correct

Marks : 1/1
